

Assembly Instructions for BestTrack® Trophy Display Stand

Remove the paper backing from the wide black foam tape and adhere it to the middle section of the aluminum base. If needed, use scissors to trim the foam tape even with the ends of the aluminum base. **Please note: There is a top edge and bottom edge to the end caps.** When positioned properly, the top edge of the end cap will sit slightly above the foam tape, approximately 1/8". Push the plastic pins through the holes of the plastic end caps and into the round holes on each end of the aluminum base. You may need to **carefully** tap the pins in with a hammer. **Plastic pins may crack if hit too hard.** Remove the paper backing of the already applied double face tape on the base, and with the base placed on a flat surface, slide the clear acrylic certificate holder up to the base, with the open end down and the long side with the holes towards the base, positioned with the open edge to the outside, to allow the certificate to be inserted. Be sure to center the clear acrylic certificate holder with the base. Press firmly to adhere the two pieces together securely. Once assembled, print your own certificate and insert it into the certificate holder.

Apply the clear adhesive backed rubber feet to the bottom four corners of the display stand.
